This invention describes novel human transmembrane containing proteins and their encoding nucleic acids. Although no specific use is given for the proteins, they may have a range of activities selected from nutritional uses, cytokine and cell differentiation, immune stimulation/suppression, haematopoiesis regulatory, tissue growth, receptor/linhibin, chemostatic/chemokinetic, haemostatic/thrombolytic, receptor/ligand, tumour inhibitor, anti-inflammatory and other undefined activities. The cDNAs can be utilized as probes for gene diagnosis and as gene sources for gene therapy. The cDNAs can also be used for large scale
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Disclosure, Page 87-89; 89pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  compounds

This invention describes novel human transmembrane containing proteins and their encoding nucleic acids. Although no specific use is given for the proteins, they may have a range of activities selected from nutritional uses, cytokine and cell differentiation, immune stimulation/suppression, haematopolesis regulatory, tissue growth, activin/inhibin, chemostatic/chemokinetic, haemostatic/thrombolytic, receptor/ligand, tumour inhibitor, anti-inflammatory and other undefined activities. The cDNAs can be utilized as probes for gene diagnosis and as gene sources for gene therapy. The cDNAs can also be used for large scale expression of proteins. The transformed cells can be used for detection of the corresponding ligands and for screening of novel low-molecular pharmaceuticals
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          240

cc encoded polypeptides have specific uses based on their homology to known polypeptides, e.g. PR0211 and PR0217 can be used for disorders associated with the preservation and maintenance of gastrointestinal mucosa and the repair of acute and chronic mucosal lesions (e.g. enterocolitis, c. Zollinger-Ellison syndrome, gastrointestinal ulceration and congenital microvillus atrophy), skin diseases associated with abnormal keratinocyte differentiation (e.g. psoriasis, epithelial cancers such as lung squamous cell carcinoma of the vulva and gliomas), potent effects on cell growth and development, diseases related to growth or survival of nerve cells can cancer. PR0265 can be used as for fibromodulin, e.g. for reducing dermal scarring. PR0264 can be used as for fibromodulin, e.g. for reducing dermal cancer. PR0265 can be used as a target for anti-tumor drugs. PR0533 may be used in the treatment of Usher Syndrome or Atrophia areata; PR0569 can be used as an anti-thrombotic agent; PR0287 polypeptides and portions may have therapeutic applications in wound healing and tissue repair; PR0317 can be used for treating problems of the kidney, uterus, endometrium, c.g. blood vessels, or related tissue, e.g. in the heart of genital tract
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        61 VSSSCGPQCHKGTPLPTYEEAKQYLSYETLYANGSRTETQVGIYILSSSGDGAQHRDSGS 120

This invention describes novel human and murine nucleic acids encoding TANGO polypeptides (which are either wholly secreted or transmembrane proteins) which can be used for gene therapy and/or vaccination. The captains which can be used for gene therapy and/or vaccination. The peptides are designated TANGO 180 to TANGO 189 and TANGO 215. The nucleic acids may be used to produce TANGO 180 to TANGO 189 and TANGO 215. The nucleic acids in a sample and therefore identify to diagnose diseases associated may also be used to detect and quantify the presence of TANGO nucleic acids in a sample and therefore identify or diagnose diseases associated with inappropriate TANGO expression of inactive polypeptides). The nucleic acids and the polypeptides they encode may be used according to standard gene therapy protocols, to treat diseases associated with inappropriate TANGO expression by supplementing a casociated with inappropriate TANGO expression by supplementing a patients own production of the polypeptide of to rectify mutations that can propagate and particularly will may also be used to identify will may be used to maintain any also be used to identify which may be used for inhibiting the activity of TANGO proteins which may be used for inhibiting the activity of TANGO proteins which may be used for inhibiting the activity of TANGO proteins which may be used to detect and quantify the presence of TANGO proteins in samples and therefore identify patients in whom the protein is sover- or under-expressed. This sequence represents the human TANGO 186 protein described in the method of the invention
                                                                                                                                                                                                                                                                                                        Isolated nucleic acids encoding TANGO polypeptides useful for preventing, diagnosing and treating diseases associated with inappropriate protein expression.
                                                                                                                                            (MILL-) MILLENNIUM BIOTHERAPEUTICS INC.
                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 9; Fig 13; 249pp; English.

New human signal peptide-containing proteins useful in treatment, prevention and diagnosis of e.g. cancer, inflammation and cardiovascular disease.

Claim 1; Page 192-193; 327pp; English.

human signal peptide-containing proteins HSPP-1 to HSPP-134. HSPPs have anti-inflammatory, antimicrobial, nootropic, hepatotropic, neuroprotective, cardiovascular and antiasthmatic activities, and can be neuroprotective, cardiovascular and antiasthmatic activities, and can be used in gene therapy. HSPPs can be used to treat or prevent disorders associated with decreased activity or function of HSPP. Antagonists of HSPP are used to treat or prevent disorders associated with increased activity or function of HSPP. Such diseases include cell proliferation (including cancer), inflammation, cardiovascular, neurological, cirrhosis, psoriasis, acquired immune deficiency syndrome, anaemia, carhma, Crohn's disease, Microbial or other infections, congestive or ischaemic heart disease, Alzhemier's, Parkinson's or Huntington's cirrhosis, psoriatis, ovulatory defects, muscular dystrophy). HSPP uncleic acids can be used for the recombinant production of HSPP, for detecting HSPP in standard hybridisation and amplification assays (for detecting HSPP in standard hybridisation and amplification assays (for diagnosis and monitoring), in gene therapy as antisense, triplex-forming or ribozyme therappeutics, for detecting related sequences or genetic variations, and for chromosomal mapping. HSPP are also used to raise

AAY53622-43 represent bone marrow secreted proteins of human bone marrow stromal cells. The proteins can exhibit cytokine, cell proliferation, or cell differentiation activity (either inducing or inhibiting). They can be used to support colony forming cells or factor-dependent cell lines, to regulate hematopoiesis, and to treat myeloid or lymphoid cell lines, to regulate hematopoiesis, and to treat myeloid cell lines, concludiferation of erythroid progenitor cells, and to treat various anaemias. They can have colony stimulating factor (CSF) activity and can concludiferation of erythroid progenitor cells, and to treat warlous concludiferation of myeloid cells such as granulocytes, monocytes or macrophages, to prevent or treat myelo.

CC suppression, to support the growth and proliferation of megakaryocytes can diplatelets, thereby allowing prevention or treatment of platelet classification of the support the growth and proliferation of hematopoetic stem cells, either in place of or in proliferation of hematopoetic stem cells, either in place of or in conjunction with platelet transfusions, to treat stem cell disorders, cuch as aplastic anaemia and paroxysmal nocturnal hemoglobinuria, or to repopulate the stem cell compartment after irradiation or chemotherapy.

CC They can be used for growth or differentiation of bone, cartilage, ctendon, ligament, or nerve tissue, as well as for wound healing and tissue repair and replacement, and in the treatment of burns, including cartilage and/or bone growth in circumsatances where conduction and also in the improved fixation of artificial joints
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to 12 secreted human proteins and the nucleotide sequences encoding them. The polynucleotide sequences given in AAA80606A80623 encode the 12 secreted protein sequences given in AAA80606A80623 encode the 12 secreted proteins have various activities dependent on the tissues in which they are expressed. Examples of the cativities of the proteins include: immunosuppressant; anti-inflammatory; antiarteriosclerotic; anticancer; vulnerary; antiviral; antibacterial; antiarteriosclerotic; anticancer; vulnerary; antiviral; antibacterial; antagonists may be used to treat prevent and/or diagnose various disease, discorders and conditions examples of which include: immune disorders e.g. Addison's disease, rheumatoid arthritis, dermatitis, and multiple sclerosis; inflammatory powel disease, cronary disorders e.g. inflammatory bowel disease, cronary disorders e.g. inflammatory bowel disease, cronary arteriosclerosis and mycocarders e.g. inflammatory bowel disease, cronary carticulars and polynucleotide sequences may also be used in wound healing and the treatment of infectious diseases. The human secreted protein gene the treatment of infectious diseases. The human secreted protein gene AAB25568. Secreted protein gene #10 is located on chromosome 12.

Sequences AAB25616 EB25618 represent genes which are related to the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Isolated nucleic acid molecules encoding human secreted proteins are used for the prevention, amelioration and treatment of autoimmune, inflammatory, hyperproliferative and cardiovascular disorders, cancer,

                                                 nucleotide sequences encoding them. The polymucleotide sequences given in MA80666-A80623 encode the 12 secreted protein sequences given in AA82566-A80623 encode the 12 secreted proteins sequences given in AA82566-B25593. The human secreted proteins sequences given in AA82566-B25593. The human secreted proteins sequences given in AA82566-B25593. The human secreted proteins sequences given in AA82566-A80623 encode the proteins include: immunosuppressant; anti-inflammatory; antiatrhitic; antirheumatic, dermatological; antipacterial; antiatrhitic; anticheumatic, dermatological; antipacterial; antiatrhitic; antipacterial; antiatrhitic; anticheumatory; antiatrhitic; and antifungal activity. The proteins, polypeptides, agonists and issasse, discorders and conditions examples of which include: immune discorders e.g. Addison's disease, rheumatoid arthritis, dermatitis, and multiple colleges in inflammatory bowel disease, coronary paraproteinaemias and purpura; cardiovascular discorders such as paraproteinaemias and purpura; cardiovascular discorders e.g. coronary arteriosclerosis and morphritis; hyperproliferative discorders brocken genences and AA80615 and AA825616-B25618 represented in sequences AAA80615 and AA825616-B25618 represent alternative secreted protein gene #10 is located on chromosome 12.

                                                                                                20-SEP-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               24-AUG-2000
 The invention relates to human Zsigl3 proteins (AAB48972-B48974), and to DNA encoding them (AAC91782-C91784). The invention also relates to expression vectors and host cells comprising a human Zsigl3 DNA, and the recombinant production of a human Zsigl3 protein or its precursor. Zsigl3 is a serine protease, and has significant homology to Bacillus licheniformis glutamyl endopeptidase, human clotting factor X, human elastase, rat mast call protease, Streptomyces griseus trypsin, bovine trypsinogen, and Hypoderma lineatum collagenase. The gene encoding human Zsigl3 is located on chromosome 1122:1. Zsigl3 is useful in industrial proceases to degrade unwanted proteins or alter the characteristics of protein-containing compositions. It may also be used in industrial applications in which proteases are utilised, including food processing, brewing and alcohol production, and as a component of a laundry detergent. The present sequence represents a human Zsigl3 variant
                                                                                                                                                                                                                                                                                                                                                                               ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequences AAU29024-AAU29228 represent PRO polypeptides of the invention. The PRO polypeptides and their associated nucleic acids can be used to detect the presence of a tumour in a mammal by comparing the level of expression of a PRO polypeptide in a test sample of cells from the animal and a control sample of normal cells, whereby a higher level of expression in the test sample indicates the presence of a tumour in the mammal. Mammals include dogs, cats, cattle, horses, sheep, pigs, goats
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gurney AL;

and rabbits but are preferably human. The polypeptides can be used to stimulate tumour necrosis factor (TNF) alpha release from human blood, when contacted with it. A specific polypeptide can be used to stimulate the proliferation or differentiation of chondrocyte cells. The PRO proteins can be used to determine the presence of tumours and also susceptibility to tumour development, particularly adrenal, lung, colon, breagt, prostate, rectal, cervical, or liver tumours, in mammalian subjects. The oligonucleotide probes specific for the PRO nucleic acids can be used for genetic analysis of individuals with genetic disorders
                                                                                                                                                                                                                                                                                                                                                 9

transmembrane polypeptides) and the polypeptides (secreted or transmembrane polypeptides) and the polynucleotides encoding them. The proporty peptides and polynucleotides can be used in treating pathological disorders and tumours, in therapeutic treatment of cardiac insufficiency disorders and tumours, in therapeutic treatment of ascorders involving pathological secretion by the pancreas, including diabetes. They can also be used in treating disorders associated with the preservation and maintenance of gastrointestinal mucosa and the repair of acute and chronic mucosal esions, and skin diseases associated with abnormal keratinocyte differentiation (e.g., psoriases, epithalial cancers such as lung squamous cell carcinoma, epithalial cancers such as lung capamous can be used as molecular markers for protein celectrophoresis purposes and can be utilised in protein protein binding assays, blochemical screening assays, immunoassays and cell-based assays.

                                                                                                                                                                                                                                                                                                                                                                                                                                          Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 261,

Sequence 18, Application US/09072384

Patent No. 6153420

GENERAL INFORMATION:
APPLICANT: Sheppard, Paul O.
TITLE OF INVENTION: SERINE PROTEASE POLYPEPTIDES

TITLE OF INVENTION: AND MATERIALS AND METHODS FOR MAKING THEM
NUMBER OF SEQUENCES: 18
CORRESPONDENCE ADDRESS:
ADDRESSES: ZymoGenetics, Inc.
STREET: 1201 Eastlake Avenue East
CITY: Seattle
                                                                                                                                                                                                                                                                                                                                                COMPUTER READABLE FORM:
MEDIUM TYPE: Diskette
COMPUTER: IBM Compatible
OPERATING SYSTEM: DOS
SOFTWARE: FASESEQ for Windows Version 2.0
